

DIGITAL MARKETING INTERNSHIP

WEEK 03

Prepared by: Jamila Haider

Date: 25-07-2026

TASK 05:

AI Content Comparison:

Tool Used: ChatGPT | Niche: Café & Bakery | Brand: Velvet Crumb Café, Rawalpindi

Overview

For this task, I used ChatGPT to generate social media post ideas, marketing hooks, and caption ideas for Velvet Crumb Café — a cozy café and bakery in Rawalpindi serving coffee, cakes, pastries, and seasonal desserts. I then compared the AI output with my own improved versions, analyzing what the AI got right, what it missed, and why human judgment remains essential in content creation.

Prompt used: “I run a café and bakery in Rawalpindi, Pakistan called Velvet Crumb Café. We serve coffee, cakes, croissants, and seasonal desserts. Give me: 5 social media post ideas, 5 marketing hooks, and 5 caption ideas for Instagram.”

5 Social Media Post Ideas — AI vs My Version

Post Idea	AI Generated	My Improved Version + Why
Post Idea 1	Share a behind-the-scenes look at how your signature item is made.	Too generic. Changed to: 'Show the 6AM oven switch-on — the moment before Rawalpindi wakes up and the croissants start baking' — adds emotional specificity and a cinematic time hook.
Post Idea 2	Post customer testimonials and reviews.	Vague. Changed to: 'Screenshot a real WhatsApp message from a happy customer and post it as a Story' — WhatsApp feels more authentic in Pakistan than formal Google reviews.
Post Idea 3	Create a poll asking which drink they prefer.	Good idea but generic. Made specific: 'Coffee vs Chai — The Great Pakistani Debate ☕🍵' with a discount prize for the winning team to drive participation.
Post Idea 4	Share a baking tip or recipe hack.	Changed to: 'The one ingredient that makes our croissants different — can you guess?' — turns a tip into a mystery/engagement hook.
Post Idea 5	Post about a special deal or discount.	Rewrote using PAS: lead with the problem (disappointing café experiences), agitate, then present Velvet Crumb as the solution — far more emotionally compelling than a plain discount announcement.

5 Marketing Hooks — AI vs My Version

Hook	AI Generated	My Improved Version + Why
Hook 1	Did you know our bakery uses only fresh ingredients?	Every bakery claims this. Changed to: 'Our pastry chef arrives at 6AM. Here's why.' — specific, intriguing, stops the scroll immediately.
Hook 2	Introducing our new seasonal menu!	Announcement hooks get low engagement. Changed to: 'We asked 100 Rawalpindi café-goers what the perfect cake looks like. Then we baked it.' — story-driven and curiosity-inducing.
Hook 3	Try our delicious pastries today!	Tells, doesn't show. Changed to: 'One bite of this croissant and you'll understand why people come back every single morning.' — social proof + curiosity.
Hook 4	We are passionate about baking!	Generic brand statement. Changed to: 'This Red Velvet recipe took 2 years to perfect. We're not changing a single thing.' — heritage, confidence, story.
Hook 5	Visit us for the best café experience in Rawalpindi!	Self-promotional and weak. Changed to: 'Rawalpindi's best-kept café secret. Locals have known for months. Now you do too.' — intrigue + exclusivity.

5 Caption Ideas — AI vs My Version

Caption	AI Generated	My Improved Version + Why
Caption 1	Enjoy our delicious pastries at Velvet Crumb. Order now!	Too short and generic. Rewrote with AIDA: opens with a sensory hook, builds desire with specific product details, ends with clear CTA and location info.
Caption 2	Fresh bakes, great coffee, cozy ambiance!	Feels like a tagline, not a caption. Changed to a customer story narrative — more relatable and trust-building.
Caption 3	Try our croissants — you won't regret it!	Weak and passive. Changed to: 'This croissant has 127 layers of butter. We counted. Come find out what that tastes like.' — specific, playful, memorable.
Caption 4	Perfect place for a coffee date!	No proof or specifics. Added: ambiance details, menu items, seating info, and an engagement question to drive comments.

Caption 5	Order online today!	Generic CTA with no context. Changed to: 'Your morning croissant is 15 minutes away. Fresh, warm, and worth every rupee. Link in bio 🧠' — specific, reassuring, actionable.

What I Learned: AI vs Human Copywriting

What AI does well

- **Speed:** ChatGPT produced 15 content pieces in under 10 seconds.
- **Structure:** naturally applied basic content frameworks without being explicitly instructed.
- **Volume:** excellent for overcoming creative block and generating a large pool of starting ideas quickly.

Where AI falls short

- **Generic output:** every suggestion could apply to any café anywhere in the world. No mention of Rawalpindi, Pakistani culture, or local audience behavior.
- **No emotional depth:** AI described products ('fresh bakes, great coffee') rather than creating emotional experiences. Human copywriting uses specificity and sensory detail to build genuine connection.
- **Weak hooks:** all five AI hooks were announcement-style. Strong hooks create curiosity or relatability in the first 5 words — the AI consistently missed this.
- **No brand personality:** all 15 outputs sounded identical — no humor, no warmth, no memorable quirk that makes a brand stick in the mind.

Key Takeaway

AI is an excellent first-draft partner for speed and volume — but it produces the average of all content it has seen, which means average output. Great café marketing requires cultural knowledge, emotional intelligence, and genuine brand personality. The best workflow: use AI to generate ideas fast at the brainstorming stage, then apply human creativity and cultural understanding to refine and localize before publishing.
